

TRIAC AC03BGM ~ AC03FGM

The AC03BGM ~ AC03FGM are all diffused mold type triac granted RMS On-state current 3 Amps.

The glassivation technique applied to pellets' surface makes this series quite highly reliable.

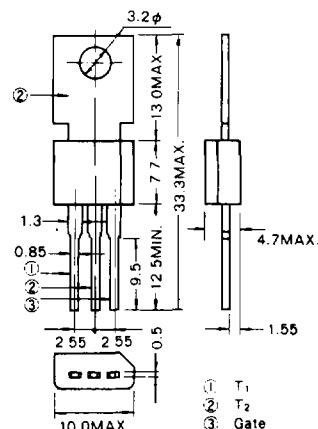

FEATURES

- The pellet surface is quite stable physically and electrically by applying glassivation technique.
- Easy installation by its miniature size and thin electrode leads.
- Less holding current distribution provides free application design.
- Low cost because of mass-production.

APPLICATIONS

Temperature Control, Light Dimmer Control, AC Motor Speed Control Electric Jar, Electric Lamp Starter, Various Solid State Switch.

NOTICE FOR INSTALLATION

1. Electrode leads (especially heat sink tablet) are not granted to be bent because of wet-proof. However it is required inevitably that a mechanical stress should not be put on mold case. Fix tightly between the mold case and the area to be formed or bent.
2. Electrode leads are not granted to be bent more than twice over 90° and avoid the bending within 1.5mm from the neck of the mold case.
3. Special lead and heat tab formings as indicated below are available at an additional cost.

4. The surface of heat sink for thermal radiator is to be smooth without any foreign matter.
5. Suitable torque value is 4–5kg.cm.
6. Soldering
 - Recommended solder: Pb/Su (4/6)
Melting point 180°C
 - Dimension from the neck of leads to dipping points 4~6 mm
 - Soldering temperature and period

250°C	less than .5 sec.
230°C	less than 10 sec.
