## 17 W Dual BTL Audio Power Amplifier

The HA13127/HA13130 are high output and low distortion dual BTL power IC designed for car stereo amplifiers.

At 14.4 V to 4  $\Omega$  load, this power IC provides an output power 17 W with 10 % distortion.

### Features

- Stand-by circuit included.  
Can be switched on & off easily by microcomputer.
- Output capacitors not required.  
These IC employ internal ASO protection circuit of high reliability current shutdown type, which can protect speaker.
- Surge protection circuit and thermal shutdown circuit are included.  
Thermal shutdown is high speed and hysteresis on & off type.
- Can be used without bootstrap capacitor.
- Low total harmonic distortion in wide frequency range
  - THD = 0.05 % Typ ( $f = 50$  Hz)
  - THD = 0.05 % Typ ( $f = 1$  kHz)
  - THD = 0.07 % Typ ( $f = 10$  kHz)
  - THD = 0.1 % or less
  - ( $P_{out} = 1.5$  W,  $f = 20$  Hz to 20 kHz)
